

# COMPLETE PACKAGED SOLUTIONS

**THE GOAL** Provide a complete packaged solution to keep operations in remote or difficult locations on track.

- FREQUENT CHALLENGES**
- Deliveries to remote locations
  - Receiving deliveries through rough terrain
  - Getting equipment for projects that cover long distances
  - Avoiding downtime while waiting on equipment

**THE SOLUTION** After experiencing difficulties finding a rental company that could deliver to their job sites, a premier provider of asset integrity testing and certification of United States pipelines reached out to HOLT Industrial Rentals for a solution. Services offered by the customer include everything needed for safe and successful gas and oil projects, such as hydrostatic pressure testing, pneumatic pressure testing, pigging, on and offline chemical cleaning and flaring, among other services. With pipeline projects spanning hundreds of miles, often in remote locations with difficult terrain, they needed a reliable partner for temporary rental equipment solutions.

***"Packaging our compressors and desiccant dryers with additional fuel tanks, ready to head out to the pipeline is just scratching the surface on our custom solutions."***

*– Jim McNeese, Outside Sales Representative, HOLT Industrial Rentals*

Without delay, HOLT Industrial Rentals sent out an expert technician to walk the site and determine what equipment would be needed.

Following the assessment, a complete rental equipment package was assembled, including a Sullair 1600H air compressor, fuel tank, and a desiccant dryer, all delivered on a transportation trailer that the client could move up and down the length of the pipeline for ease of mobility through rough terrain. Seven of these rental equipment packages were delivered by the HOLT Industrial Rentals team across various locations in the pipeline.

Having found a reliable rental partner for their pipeline projects, the client continues to call HOLT Industrial Rentals for all of their rental equipment needs.

## DID YOU KNOW?

Most asset integrity solutions include pig launching and line drying, which both require air compressor solutions. Such services are vital to pipeline operations in order to maintain quality, health, safety, and environmental standards.

**Industrial power, climate control, and compressed air.**

**MORE THAN EQUIPMENT. SOLUTIONS.**
